

What to do ...

Having drawn an assignment you are supposed to (some items below may not be relevant to all methods):

- y not be relevant to all methods):

 Describe what the method basically is used for (for instance by classifying it in the "Data -> Processing -> Information -> Processing -> Decision" diagram).

 Classify the method according to general model concepts like static/dynamic, stochastic/deterministic

 Describe how different kinds of knowledge is handled by the method (here Chapters 6 & 9 of the textbook Herd Management Science may be of help to you).

 Describe what kind of data/decisions the method is particularly well suited for.

 Explain strengths and weaknesses of the method.

 Give examples of applications (if any).

Explain strengths and weaknesses or the method.
 Give examples of applications (if any).
 Describe the aspect mentioned as subtitle.
You have 12 minutes for this. If you don't use all 12 minutes (or if we want you to elaborate further on certain aspects) we will ask questions (relating to the assignment).

Half an hour before examination, one of your mandatory reports is drawn at random. At the exam, the last 10 minutes will be used for a discussion of the report. Initially, you are asked to describe the strengths and weaknesses of the method in relation to the problem it is intended to solve. Afterwards, we will ask questions of the following kind:

• Further questions regarding strengths and weaknesses.

• Could the model/method be improved in order to give a better solution?

• Could we use other methods for this problem? Would that be

- Could we use other methods for this problem? Would that be better? Why (not)?
 Explain why the results showed ...

We have 10 minutes for this discussion.

Exam schedule (randomly assigned time slots)

First names	Last name	Hand out of assignment	Examination start
Ashley	Norval	10:00	10:30
Betina	Hammer	10:30	11:00
Emilie	Handberg	11:00	11:30
Anja	Madsen	13:00	13:30
Anita	Nielsen	13:30	14:00
Thomas	Nielsen	14:00	14:30
